

EMPOWERSUPPORT INSTALLATION

EmpowerSupport is used to install new releases and updates of the EmpowerWin application.

EmpowerSupport consists of

1. The EmpowerSupport application (executable)
2. The Empower Support service (with a space).

DOWNLOAD EMPOWERSUPPORT INSTALLATION FILE

Empower Financials sent an email to you with these instructions attached. The email contains a link that enables you to download the EmpowerSupport installation file from our secure file sharing site.

Click the link in the email. You are taken to our file sharing site and shown the file.

Click on the download icon in the upper right on the screen.

The empowersupport.msi, contained in a .zip file, is sent to your Downloads folder.

Extract the EmpowerSupport.msi file from the zip file after downloading.

EMPOWER SUPPORT LOGON ACCOUNT

Before uninstalling the current EmpowerSupport app run Services on your server and navigate to the Empower Support service. Right-click and select Properties. Click on the Log On tab and note of the Account you are currently using to Log ON the service.

The Account is usually svc_empowersupport since that is what we recommended in the instructions we originally sent for installing the EmpowerSupport app/service. You will need to know the password for this account as you need to re-enter this information after installing the new Empower Support service.

If you do not know the account's password, then use Active Directory to reset the password.

UNINSTALL EMPOWERSUPPORT

Uninstall the EmpowerSupport app before running the newly downloaded EmpowerSupport.msi file to install a new release.

- Run the Windows Add and Remove Programs.
- Scroll down to EmpowerSupport and click the Uninstall option from the ellipsis control

INSTALL EMPOWERSUPPORT

- Navigate to the folder containing empowersupport.msi and click on it.
- When the installation begins a welcome screen is displayed.
- On the welcome screen click Next.
- On the destination folder screen click Next.
If you prefer, you can change the location where EmpowerSupport is installed (not recommended).
- Click Install.
- After EmpowerSupport is installed, you will want to change the Empower Support service account information.
- Run Windows Services. Select the Empower Support service and Stop the service.
- Right click, select Properties.
- On the General tab, set Startup type to “Automatic (Delayed Start).”
- Click on the Log on tab.
- Change the Account to use to “svc_empowersupport” (or the account you created for this purpose). Enter the password.
- Click OK. Exit the Properties window.
- Start the EmpowerSupport Service

You may now run the EmpowerSupport app from the Windows Start button.

TROUBLESHOOTING EMPOWERSUPPORT INSTALLATION

If the Empower Support service does not start, or starts and then quits, double-check the following:

Run Active Directory. Check the svc_empowersupport account is a member of the Empower Users group in Active Directory

In SQL Server Management Studio, navigate to Security, Logins and click on the Empower Users group. Right click Properties. In the Properties window click on User Mappings in the left-hand panel. Click on your database. In the Users mapped to section click on your database checkbox to select it. Check in the Database Role Membership tile at the bottom of the page that db_owner is checked and public is checked. Exit SSMS.

Run Services from the Windows Start button. Navigate to the Empower Support service. Highlight it and right click to Restart the service.
